

# Altiris Service & Asset Management 3 Step IT Connector Pack

## Overview

Altiris Service & Asset Management 3 Step IT Connector combines the leased equipment data provided by 3 Step IT together with inventory data created by Altiris Inventory Solution. The Connector will integrate the information of the leased equipment into Altiris databases where they will be automatically placed to their Cost Center's for easy and fast reporting. The data from 3 Step IT includes

- Asset serial number (computer, monitors, etc)
- Description of the asset
- Leasing payments in EUR

### Leasing schedules

New lease schedules will be automatically created into Altiris for keeping track of the lease expire dates and tasks will be generated with automatic notification of the expiring leases.

The Connector will read the leased equipment data provided by 3 Step IT on given schedule so the future synchronization of the data will be done by simply placing the updated data file from 3 Step IT over the existing one.

## Requirements

Altiris Notification Server

Altiris Service & Asset Management Suite Level 2

Altiris Service & Asset Management 3 Step IT Connector Pack from UBM

## Reports

### Basic reports included with the Connector

- » Leased assets found from inventory
